

Natural Stone Care & Maintenance Guide

An Ounce of Protection is Worth a Pound of Cure

Natural stone has been a top choice of discerning consumers for their solid surface needs for many years. While it is true that materials such as granites and quartzites provide very low porosity options vs. marbles and other natural stones, it is still recommended they be sealed & properly maintained.

DO use coasters under glasses, especially if they contain alcohol or citrus juices

DO use trivets or mats under hot dishes or cookware

DO dust countertops, islands, vanities and floors frequently

DO blot up spills immediately to minimize permanent damage to the stone

DO clean surfaces regularly with neutral cleaners specifically designed for natural stone.

DON'T use vinegar, bleach, ammonia, or other general purpose cleaners

DON'T use abrasive cleaners or alkaline cleaners not specifically formulated for natural stone

Protecting Your Investment

All natural stone should be sealed. Sealers are designed to minimize the risk of staining. For added peace of mind, there is a warranty program that exists for natural stone. Make sure to ask your Fabricator or Kitchen & Bath Dealer for more information on the Laticrete Stonetech Professional Warranty program or grab a brochure from our showroom.

No matter how careful you are, spills are going to happen. A quick response and the right solutions can prevent spills from damaging your stone and help keep it looking beautiful for years to come.
